

MUSIC SCHOOL

The Brains International School of Music offers children, teenagers and adults the opportunity to begin to study music or to deepen their mastery of an instrument. The philosophy of our work can be summed up with the following three main aspects.

» A teaching methodology and attractive repertoires, taking into account the particularities and characteristics of each student.

» Permanent communication with families to stimulate and optimise the student's practice at home.

» The creation of an agenda of concerts and auditions, with the idea of generating short and medium-term objectives that encourage the student in practice.
